

1. Brainstorming & Ideation Phase

The brainstorming and ideation phase was carried out to identify a suitable problem in the school IT helpdesk process and to develop an effective solution.

The school IT helpdesk receives many incident requests from students and teachers, including Wi-Fi issues, projector failures, password problems, and slow computer issues. Currently, IT staff manually review each request and assign the appropriate category. This process requires more time and may lead to errors. [?]

Auto Ticket Classification using Flow Designer.pdf

During the ideation process, the following solution was proposed:

Automate the classification of IT support tickets.

Identify the issue using keywords in the ticket description.

Automatically assign the appropriate Category and Subcategory.

Reduce the manual work of IT staff.

Improve the efficiency of ticket routing.

Send an automatic email notification to the caller after ticket creation.

Use ServiceNow Flow Designer to implement the solution without complex coding. [?]

Proposed Idea :

The final idea was to develop an Auto Ticket Classification using Flow Designer system. The system analyzes the ticket description and automatically identifies common issues such as Network, Hardware, Access, and Performance. ?

Outcome:

The brainstorming phase resulted in the idea of a no-code automated ticket classification system using ServiceNow Flow Designer to reduce manual effort and improve the IT helpdesk process.
