

6. Testing & Validation Phase

The testing and validation phase is carried out to ensure that the developed system works as expected and satisfies the required functional requirements.

The system is tested to verify data accuracy, automatic ticket classification, email notification, and proper field values. [?](#)

Data Validation Checks

The following checks are performed:

Mandatory fields are captured correctly.

Auto-number is generated without duplication.

Category and Subcategory values are stored accurately.

Reference fields correctly resolve to the user and group tables. [?](#)

Test Scenario 1 – Wi-Fi Issue

A caller is entered and the Short Description is given as:

“WiFi not working in library”

After saving and reloading the form, the system automatically assigns:

Category → Network

Subcategory → WiFi

Email → Sent to caller's email ID [?](#)

Test Scenario 2 – Projector Issue

A caller is entered and the Short Description is given as:

“Projector not turning on.”

The system automatically assigns:

Category → Hardware

Subcategory → Projector

Email → Sent to caller's email ID
