

5. Project Development Phase

The project development phase focuses on implementing the Auto Ticket Classification using Flow Designer system in ServiceNow.

First, a custom table named Incident Workflow is created to store ticket records. The required fields such as Number, Caller, Category, Subcategory, Short Description, Description, State, Assigned Group, and Assigned To are then configured. [?](#) [?](#)

Flow Designer Development

A Flow Designer flow named Auto Classify School IT Tickets is created. The flow is triggered when a new record is created and the Category field is empty. [?](#) [?](#)

[Auto Ticket Classification using Flow Designer.pdf](#)

The flow checks the Short Description and automatically classifies the ticket:

WiFi / Network → Category: Network, Subcategory: Wi-Fi

Projector → Category: Hardware, Subcategory: Projector

Forgot Password → Category: Access, Subcategory: Forgot Password

Slow Computer → Category: Performance, Subcategory: Slow Computer [?](#) [?](#)

Email Notification

After classification, an email notification is configured using Flow Designer. The email is sent to the caller's email address with a ticket confirmation message. [?](#)

Outcome:

The development phase implements the required ticket table, fields, dependent choices, automatic classification flow, and email notification.
