

8. Conclusion

The Auto Ticket Classification using Flow Designer project provides an end-to-end automation solution for a school IT helpdesk. The main objective of reducing manual effort in ticket categorization and improving response efficiency is achieved through automation. [?]

Auto Ticket Classification using Flow Designer.pdf

The system automatically classifies IT tickets based on the Short Description provided by students. The dependent Category and Subcategory fields help maintain accurate and consistent ticket information. Automated email notifications also provide immediate confirmation to the caller after ticket creation. [?]

Auto Ticket Classification using Flow Designer.pdf

The project follows a phased development approach covering requirement analysis, backend configuration, Flow Designer automation, testing, validation, and documentation. The solution is designed to be easy to maintain and scalable for future requirements. [?]

Auto Ticket Classification using Flow Designer.pdf

Overall, the project demonstrates how ServiceNow Flow Designer can be used to create a user-friendly and maintainable IT helpdesk automation solution without complex scripting or machine learning. The system can also be extended in the future with features such as assignment automation, SLA tracking, and predictive intelligence. [?]
